Abstract:

The circle of Qur'anic sciences expanded to nearly 100 sciences, one of the most important of which was the science of the rules of interpretation, which originated as a science of the Qur'an late in other Qur'anic sciences. This study, which talks about the origins of the rules of interpretation, did not get its luck from the qur'an sciences, especially from the literature of the Azhari character, and then this study, which talks about the origins of the rules of interpretation, mentioned its ten principles and exposure to its origin from the era of pure prophecy and its evolution through successive times. The first, entitled "Principles of The Rules of Interpretation", included the ten principles of this science from limit to issues, and the second chapter entitled "The genesis of the science of the rules of interpretation and its evolution", and included the speech on the genesis of this science and the first of a thousand in it and its evolution through the five stages passed by it, and then came the conclusion and included the most important results and recommendations that were made through research and then the tail of the research with an index of references and sources from which he derived his scientific material and index of his subjects.
Method: The integrative approach was followed in this research (inductive, analytical, critical, comparative)

Results: The science of the rules of interpretation is an independent science of the Qur'an — the first of a thousand in this science is Imam Shafi'i, may God rest his soul in his book The Message, which was the first appearance of the science of the rules of interpretation in the era of the Sahaba, may God bless them, where they were inferring it in their words when exposed to the verses of the Holy Quran. The questions of the science of the rules of interpretation were scattered in the books of the sciences of the Qur'an and then distinguished from them late - expressing the rules of interpretation with the origins of interpretation - the science of the rules of interpretation passed five stages in its history - some of the books of the rules of interpretation belong to the Wahhabi curriculum, which calls for caution from the tucking of certain doctrines in the folds of these books.

Recommendations: The need to gather from al-Azharis to extrapolate the books of interpretation, the books of the language and the books of origins to extract the rules of interpretation from the basis of the rules of the Al-Azhar curriculum - the need to develop a course that will study in the departments of interpretation and the sciences of the Qur'an at the level of the University of Al-Azhar at the high leave and graduate stage bearing the name of the rules of interpretation - the need to prepare letters and university research in the science of the rules of interpretation.

Keywords: Rules, Origins, Interpretation, Principles, Genesis, Evolution.
